

## Tutorial n°1

### 1 Exercice 1

In this first tutorial, the students are invited to deeply understand 'Superpixels Segmentation'. Mastering one approach of segmentation can help to understand other approaches.

1. Read the original paper of Superpixels segmentation,
2. Implement the algorithm of Superpixels segmentation,
3. Test the algorithm with the given dataset and with different values for the different parameters,
4. To better understand the algorithm, change the criteria of merging/splitting and see the impact of that.
